Azure Optimisation Review

Many organisations migrate their IT infrastructure to Microsoft Azure to unlock cloud benefits such as enhanced security, greater flexibility, and increased productivity. However, organisations often fail to get the full return on investment and maximise the value of cloud. For this reason, Advanced have built a review service which will provide in-depth analysis into your Azure estate and outline areas that can be improved and adjusted.

Service Overview

Advanced's' Azure Optimisation Review will focus on areas covered under the Microsoft Cloud Adoption Framework and the Microsoft Azure Well-Architected Framework, providing a gap analysis report and outlining areas for improvement. Areas covered include:

Reliability - Architecting reliability into your environment ensures that your workloads are highly available and can recover from failures such as data loss, major downtime, or ransomware incidents.

Operational Excellence - The operational excellence pillar covers the processes that keep a workload running in production. Deployments must be reliable and predictable, such as automated deployments that reduce the chance of human error.

Performance Efficiency - Is the ability to effectively scale your workloads to meet the demands placed on it by users in an efficient manner. Load and stress tests can be run on workloads to establish performance baselines to ensure you are only paying for what you need.

Cost Optimisation - Cost optimisation for well-architected workloads means reducing unnecessary expenses and improving operational efficiencies. Create economically efficient workloads by balancing business goals with budget justifications.

Security - Well-architected workloads rest on a foundation of highly secure services and practices. As one of the most important aspects of any architecture, security provides confidentiality, integrity, and availability assurances against attacks and abuse of data and systems.

Following the review, an Azure Expert will run a consultative workshop with you to discuss the key findings. They will provide a roadmap to align your current Azure infrastructure to the CAF framework and implement changes that will allow your organisation to have a fully governed, secure and resilient infrastructure for future workloads. This is essential to having a successful transition to the cloud and achieving your cloud adoption goals.

How do I know if this review is right for my organisation?

- You're concerned of potential security threats towards your cloud infrastructure.

- Azure costs have spiralled greater than expected.

- You're concerned how resilient your Azure infrastructure is.

- You're struggling to scale as efficiently as the business requires.

- You want to validate your current configuration against Microsoft Best Practice.

- You'd like to gain a greater understanding of capabilities and features in Microsoft Azure.

How much does the review cost?

The Azure Optimisation Review is priced on the number of Azure resources assessed to ensure that the review fits your requirements.

- Under 1000 resources* - £5,000.00

- 1000+ resources - Advanced to quote upon request

*A resource is a manageable item that is available through Azure e.g., Virtual Machines, Virtual Networks and Storage Accounts.

Customer Requirements

- All relevant stakeholders to join the workshop.

- Provide Advanced with Global Reader Access over all relevant Azure subscriptions.

Why Advanced

Advanced's credentials are second to none. We provide mission-critical services and support that helps our customers focus on their core activity while accelerating and transforming digitally. As a longstanding Microsoft Partner with specialisations including Infrastructure (Azure), Azure Virtual Desktop Advanced Specialisation, and Digital & App Innovation (Azure), you can lean on our expertise to create an empowering roadmap, unlocking the capacity and flexibility to take your business into a stronger future.
