

Anesco Case study

Learn how Anesco have stayed at the forefront of their market by using Advanced's software

About Anesco

Anesco are a global leader in renewable energy and are recognised as one of the top cleantech companies in the world. With a focus on renewables, energy storage, and energy efficiency, Anesco are committed to the transition towards a net zero energy network.

Working with major energy utilities, Anesco have designed (and built) 106 solar farms and remain the market leader for solar and battery storage in the UK. They currently manage and monitor over 1.3GW of clean energy across 24,000 assets. And their energy efficiency work has helped to lift over 350,000 people out of fuel poverty (while also saving 1.25 million tonnes of CO2).

Anesco's Advanced experience

From 2010 onwards, Anesco were successful using an inhouse system, with additional help from their Excel sheets, Word documents, and calendar. However, in 2018 the company anticipated significant market growth, and realised they had reached the limits of what could be done with their existing technology. So, they adopted Advanced's Field Service Management software.

"In 2018 we saw the growth of the renewables market and started looking for a suitable solution. To start with, we identified 30 key objectives for where we wanted to be in the future. There was an in-depth procurement process, which led to us choosing Advanced's DRS, Job Manager, and InfoSuite systems, all of which scored highly on our checklist."

Anesco describes Advanced's software as intuitive with built-in job logic. Users can follow prescribed workflows, and the device walks them through the steps that must be taken.

"The range of functionality within the software helps us to configure different job streams. It allows us to tailor our contractual obligations or PPM schemes very precisely for clients so we can deliver on promises."

Nowadays, data is absolutely key, and Advanced's Field Service Management software allows Anesco to visualise, monitor, and present information in different ways for the team to consume.

"The functionality and scalability of Advanced's software, as well as the consistent investment in their product development, means we can stay at the forefront of our field here at Anesco."

Calum Morrison, Head of O & M Business Systems, Anesco

Why Dynamic Resource Scheduler?

"We have multiple ways of working, and DRS gives us the flexibility we need to plan work effectively."

Why Job Manager?

"Real time updates help us to make instant decisions around progressing jobs, creating follow up appointments, and ordering spare parts."

Why InfoSuite?

"With InfoSuite, we can report on an almost endless number of metrics relating to our teams, customers, and investors. We can assess what is happening in the field, utilise that information, and drive the business forward."

Future with Advanced

"We are looking to create preformatted reports in InfoSuite and set up a scheduled delivery. We're hoping to roll this out to the business this year."
