

## OpenLogistix

### Comprehensive distribution, production and supply chain management

**Our focused solution simply improves control, visibility, productivity, quality and efficiency throughout the supply chain. Our customers repeatedly benefit from reduced operating costs and increased profitability.**

OpenLogistix provides a comprehensive distribution, production and supply chain management software solution with extensive reporting integrated with our financial, payroll and HR solutions.

The solution has been developed to ensure an open, highly flexible and configurable system, able to meet your specific needs in a timely and cost effective way.

#### **Features and Benefits**

- > Better management information
- > More effective sales order processing
- > Smarter buying
- > Efficient stock/warehouse operations
- > Stock and pricing data integrating with accounting and invoicing systems
- > Single set of data, so you only have to input the data once
- > Sales Order Processing and Purchase Order Processing is integrated in the

system so that stock balances and statistics are automatically updated as orders are processed

- > Automatic stock monitoring, triggering orders through Material Requirement Planning and Master Production Scheduling
- > Automatic batch, SSCN and serial number control
- > Bar coding systems which speed up processing and recording. The software will print and read bar codes from your computer.

#### **A range of modules to suit your needs**

Our solution comprises a range of integrated modules that incorporate multi-company and multi-currency facilities throughout. All modules incorporate extensive functionality in a simple user interface and come with a range of standard enquiries, reports and import and export facilities to allow users to work intuitively with the system.

These modules include Sales Order Processing, Item Tracker, CRM, Bill of Materials, Archiving and Inventory Management.

## Easy to use and configure as needed

### More than 200 reports available

OpenLogistix provides over 200 standard reports across the available modules. These reports can be run immediately to screen or printer, forwarded in an e-mail or scheduled for completion at another time. There are standard parameterised reports ready-to-run in every module as well as multiple format options.

A choice of modules covering logistics and manufacturing can be fully integrated with finance and project costing. OpenLogistix core modules operate standalone and integrate with other third party systems which has consistently provided an advantage for anyone seeking to implement a new solution in incremental phases.

### Working as a partner

Our success is closely tied to that of our clients, working as a business partner rather than the traditional customer/supplier model. This has led to an approach which results in a very close working relationship where we work with you to achieve your goals.

All of the OpenLogistix functionality has been specifically designed to provide the high level of sophistication you need. The solution provides many options that allow you to configure it for efficiency and ease of use:

- > Consistent screen handling standards for a simple and efficient user interface
- > Choice of 'Outlook', 'Explorer' and traditional drop-down menus
- > Inclusion of shortcut keystrokes, buttons and desktop icons
- > Comprehensive on-line user-specific notes
- > Specific function options for keyboard and mouse users
- > User maintained notepad fields and attachments on static and transaction records
- > Dynamic enquiries with user preferences for colour, column and display layouts
- > Ability to copy and paste from screens and reports to the desktop
- > Ms Word Mail Merge for user-definable document production such as purchase orders
- > Media function to attach relevant documents, pictures and spreadsheets to a record
