

Unette Case study

How Unette used Business Cloud Essentials to double their production without hiring additional staff

About Unette

Unette is a manufacturing company located in Cheshire, Northwest England. Unette boast over 50 years in liquid filling innovation. Their innovative approach is strongly backed by a knowledgeable team offering a turnkey solution.

Unette's service extends to design, sourcing product and other packaging, even extending to distribution.

Unette supplies all types of businesses from different sectors including Health & Nutrition; Personal Care; Household; E-liquid and Industrial with solutions that can accelerate growth, reduce costs, and optimize sales.

Their Advanced Experience

Unette started using Business Cloud Essentials in 2018. Business Cloud Essentials wasn't the first manufacturing software the company used. After having a bad experience, they decided to change solutions. When we asked David about what he liked the most about the software, his response was:

"I find the look and feel of Business Cloud Essentials really good. It's simple to navigate, quick and easy to use. It's nice to have all your information in one place!"

David admits that during the implementation phase there was a learning process regarding the data they have put into the system. There were a few challenges when they implemented the software. When they got in touch with Business Cloud Essentials support team, they were able to work together and find out what was wrong and fix the issue.

"An All-in-One solution it's only as good as the data you put in! Watching the demos and being able to test the product and put our own data on the 'test mode' made it a lot easier. We were able to train our team without being worried of affecting the operations."

Unette was able to increase their production, going from 20 million units produced to 40 million without increasing their labour costs. Thanks to hard work, organisation, and the right software solution, what seemed impossible, is now a reality.

"We went from 20 to 40 million units being produced after we started using Business Cloud Essentials successfully. We were able to double our production without hiring any additional staff."

David Rimmer, Managing Director, Unette Group Ltd.

Why Business Cloud Essentials (BCE)?

"I was looking for a cost-effective ERP solution that would be suitable for a Manufacturing business without having to spend a fortune with customisation."

Cloud-based Accounting & Manufacturing advantages

"The fact that Business Cloud Essentials was a cloud-based solution, enabled us to work from home during the pandemic."

Implementation process

"The implementation process was really good! During the transition period, the Advanced team was able to help us throughout our entire journey."

David Rimmer's approach to Business Cloud Essentials

"We wanted to run Business Cloud Essentials how it's designed to work and base our operations on that. It worked!"
