

## Cyber Discovery Service

The threat of cyber attacks has never been greater.

In today's connected world, your organisation's exposure to attacks grows daily, risking the digital services that support your operations and growth. Securing your organisation is a necessity and needs to be a priority.

Advanced's Cyber Security Services are built to meet your demand for assurance that the threats and attacks made against your company can be detected, responded to and mitigated.

Our mission is to be the fastest to find the threat and the fastest to fix the issue, across Cloud, hosted and on-premise IT infrastructure.

### **Cyber Discovery Service**

Our Managed Cyber Discovery Service provides the delivery of a Vulnerability Management Service, with Asset Discovery, Vulnerability Scanning, Compliance Reporting and a Security specialist to help define the results and manage remediation. A Threat Index is also provided, which combines the results from your environment for greater risk awareness, as well as access to AWS, Azure and Google, CIS benchmark assessments and an Extended Endpoint Protection function endpoint behaviour analysis. This complements your existing AV product and provides centralised risk reporting.

The partnership we have with Alert Logic,

providers of market-leading, Cloud-based capacity, enables our Detection technology. Their offering gives you a quick way to discover and visualise weaknesses in your deployed assets with regular automated Network Vulnerability Scanning and Health Monitoring. It also gives the ability to identify 91,000+ Network Security vulnerabilities, 8,600+ software configurations, internet-facing vulnerabilities in web applications, including OWASP Top 10 and PCI ASV-level vulnerability scanning.

Our Response teams provide skilled knowledge, using their vast experience to analyse, interpret, advise on the findings and help manage the remediation of the vulnerabilities.

With a 0% unemployment rate in Cyber Security, finding and employing skilled staff is a significant challenge. By outsourcing elements of your practices to our teams, this service takes that problem away and delivers you with the confidence that you are properly supported.

## The solution

To combat the continuous threat of cyber attack, our service scans and assesses your systems 24/7 to detect risks before they cause real damage. The platform has been built to provide a common view on threats, vulnerabilities and configurations, across all of your environments. Continuous vulnerability scanning provides a view of exposure across all Cloud, hybrid and on-premise systems. Through dynamic dashboards, you can rapidly see relevant information that allows targeted response and analysis of those events that affect your security posture.

As this is a Cloud-hosted service, the ability to scale to meet any requirements is available as standard. This means we can accommodate any size of organisation, anytime, anywhere and on multiple platforms and give instant access. Users can simply login to the platform online, wherever and whenever, significantly reducing operating costs and accommodating the increasing mobility of the modern workforce.

### Managed Detection and Response

- > Asset Discovery and Visibility
- > Vulnerability Scanning
- > Cloud Security Configuration Checks (Azure, AWS and Google)
- > Extended Endpoint Protection
- > Threat Risk Index
- > Security Compliance Scanning and Reporting
- > Support for Multiple Environments
- > Technology Management
- > Provision of a Security Specialist

## The benefits

### Managed Cyber Security

Our Managed Cyber Security Services provide you with a fully managed end-to-end service, from initial project management and rapid installation

of security tooling, through to continuous daily monitoring and remediation support. Also included is system management and upkeep with constant tuning and resolver group management. Where applicable, third-party co-ordination is also available. The service covers the provision of skilled staff, with professional development included alongside the identification of new trends to ensure the team supporting your organisation are a step ahead.

### Information risk mitigation and response

The strategic, business level benefit of this is the overall reduction to Information Risks in your organisation. Major events over the last few years have shown how vulnerable *all* IT systems are to new and old attacks, with some of the simplest being carried out by teenagers in their homes.

Former Google CEO, Eric Schmidt, says,  
*"The internet is the first thing that humanity has built that humanity doesn't understand, the largest experiment in anarchy that we have ever had."*  
*Don't let that anarchy affect your business.*

### Complex technical management reduction

Security solutions are technically complex by their very nature. Our Cyber Discovery Service takes that complexity and the onus of it, away from your organisation. Leaving you with confidence and time to focus efforts on other key areas of activity.

### Cost effectiveness

Cyber Security demands significant investment. Advanced have put together an effective solution that is rated by global experts and thousands of customers worldwide, with cost efficiency for your organisation in mind.
