

COMPLIMENTARY ASSESSMENT

Advanced Azure Health Check

www.oneadvanced.com

 **advanced**
IT Powered Possibility

Service Overview

We are pleased to be offering a complimentary health check which will review your existing Azure environment and provide recommendations in relation to **cost, security, and performance**.

This assessment will help ensure that you are making the most out of your investment in Microsoft Azure and realising the true advantages it can bring to your business.

This will be delivered by an Advanced Cloud Advisor in a virtual workshop format, broken down into three key stages:

Discovery	Strategy	Execution
Analysis of existing environment	Understand business objectives and priorities	Joint plan of action for implementing recommendations

A PDF presentation will be shared with you after the workshop outlining the outcomes discussed and we will work with you to identify where support may be required to implement any approved recommendations.

The workshop will cover 3 main areas:

Cost Optimisation

Advanced will provide a list of recommendations to ensure you are maximising your investment in Azure. Areas we will assess may include:

- Reserved Instances
- Auto Shutdown
- OS Licensing
- Right Sizing Virtual Machines

Our recommendations should help identify costs savings, provide you with a clearer view of the budget and give you greater awareness of Azure pricing models.

Security

Advanced will provide a list of recommendations to ensure your environment has the relevant protection in place from security threats, as well as meeting standards from a compliance protocol. Areas we will assess may include:

- Multifactor Authentication (MFA)
- System Updates
- Encryption at Rest

Our recommendations should enable you to enhance your security posture, align to Microsoft best practice, and reduce the risk of attack.

Performance

Advanced will provide a list of recommendations to ensure you are realising the true advantages of adopting cloud technologies and improving productivity. Areas we will assess may include:

- Reliability (e.g protection against data loss)
- Performance (e.g storage optimisation)
- Operational Excellence (e.g validation environments & Azure policy recommendations)

Our recommendations should help ensure that your environment is highly performant, resilient, efficient, and in-line with Microsoft Best Practice.
