

Cloud Forms Integration

A full-service legal forms platform

We built Cloud Forms as a natural progression for users of the established Oyez and Laserform desktop forms applications. It provides an ideal solution for firms that require the same valued content, but delivered as a modern web application.

True Expertise

One of the key values of both Laserform and OyezForms is the support we provide for multiple 3rd party integrations.

Case and workflow system providers simply do not have the expertise required for the preparation, or maintenance, of legal forms software. Because the task requires specialist knowledge, most system providers do not attempt to replicate a high quality forms package within their own application. It's much easier for them to integrate with one of the market-leading solutions from Advanced.

Smooth integration

We are aware that firms who wish to move to a more modern forms package need it to integrate easily with the systems they already use. We can help.

In common with other modern web applications, Cloud Forms was built using APIs. We knew from the outset that uncomplicated API access would be crucial, and that is why we have supplied the providers of systems that integrate with our

desktop packages all of the API documentation they need to ensure a smooth process. We've also maintained the field codes from Laserform into Cloud Forms to ensure that any mapping tasks are simplified.

Form integrations moving to Cloud Forms

If you have an existing integration with Laserform, the field codes in Cloud Forms remain the same. Instead of the software calling the Laserform API and sending field data, it can call the Cloud Forms API, and send the same field data.

Although the field codes are not the same as those in OyezForms, the process of calling the Cloud Forms API, and sending field data, is the same.

On-going Support

When moving to Cloud Forms, your firm will remain supported throughout. Our support teams work with software providers to ensure our users receive a concise response to any queries.

Cloud Forms API information is available here:
advancedcsg.github.io/cloudforms-integration

If you'd like to move to a modern and flexible forms application, please speak to your provider to find out if they integrate with Cloud Forms. If they don't, ask where that process is in their development roadmap.
